HR workforce & Attrition Analysis

Active Employee and Attrition rate each Department

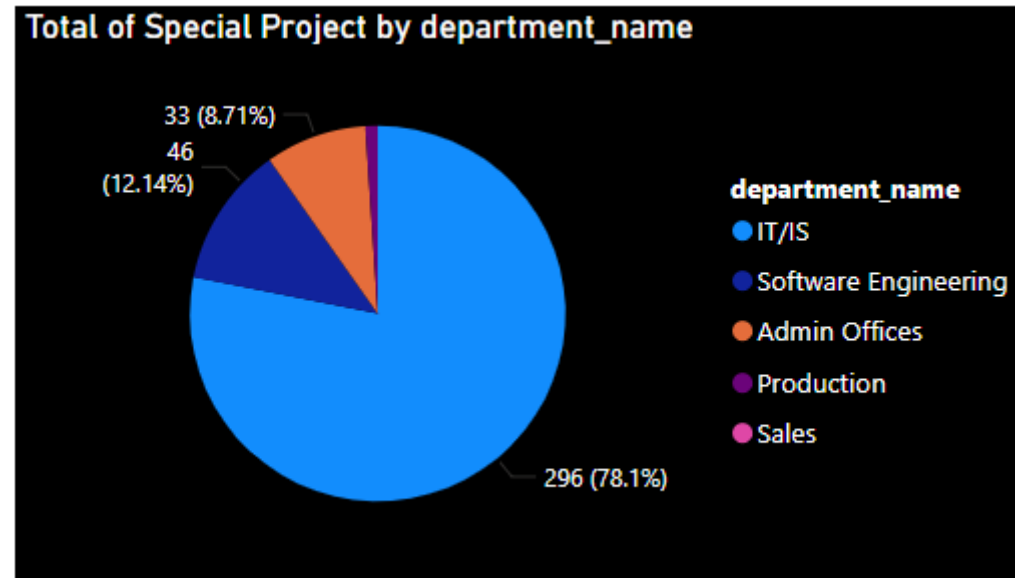

In this graphic, we can see production have the highest attrition rate and total active employee. We also can see production hiring tend to left early. What is the problem?

Salary comparison with attrition rate

As we can see, production have the lowest average salary, the workforce in production department slightly higher so employee tend to leave.

Special Project Analyze

Special project will give some benefit to company and employee. By include employee to special project employee who perform well are trusted. Special project also will cause the employee have more salary, as we can see IT/IS department get the highest average salary in this company.

Cause Hypothesis

- High attrition in production will affect:
 - Productivity
 - Training cost
 - Operational stability
- Key Point that we get in production department:
 - Lowest salary average
 - Fewest special project involved (Sales have 0, but production have 4)
 - Production vs Sales department job comparison:
 - Although Production employees have higher involvement in special projects, they still exhibit significantly higher attrition compared to Sales
 - This suggests that project involvement alone does not explain attrition differences
 - Department-specific factors such as job nature, work environment, and compensation are likely stronger drivers

Other Department Analyze

- For example: IT/IS department.
 - Show at the second lowest attrition compare to others department
 - This may be caused:
 - This department have the highest salary average across the company.
 - The highest special project across the company
- If they have more special project they will be feel closer to the company and tend to hard to leave it.
- The tenure age group tend to not leave company if they already 10 years more in the company. Maybe it's a senior employee.

Recommendation

- Fix early-Tenure attrition
 - Strengthen onboarding
 - Implement buddy system or mentorship for ne hires
- Improve working condition in Production
 - Review workload from employee
- Re-evaluate compensation structure
 - Benchmark production salaries against other department or market rates
- Use special project as Engagement strategically
 - Add more special project for production team, especially for new hires so they will come close together
